WHY YOU NEED TO BE USING MULTI FACTOR AUTHENTICATION (MFA)

Multi-Factor Authentication (MFA) is a security system that requires users to provide two or more forms of identification to gain access to a system or application.

If you've ever signed into your social media account, or banking app for example, it might occasionally ask you for further authentication, to add another layer to the security of your data.

Help your team become MFA Cyber Champions today by following our recommendations below:

-  Schedule the Phriendly Phishing MFA training course (You can do this in advance)
 -  Start the week off right with a personalised email to your team about the importance of MFA directing them to more resources.
- Download the email drafts below.
[Email file](#) | [Word Document](#)
-  Share the MFA tip sheet with your team. You can post this in slack or teams or print out and post in your organisation's lunch room.

Don't have training to schedule? Talk to our team today to book a demo and view our courses!

A GUIDE TO CREATING STRONG PASSWORDS & PASSPHRASES

Passwords are still the most common authentication method used online, even with the introduction of new login methods, such as passkeys, biometrics and token-based authentication.

On average, it takes a hacker 2 seconds to crack a password that has 11 characters.

Help your team become Cyber Champions today by following our recommendations below:

-  Schedule the Phriendly Phishing password and passphrase training course (You can do this in advance)
-  Start the week off right with a personalised email to your team about the importance of creating strong passwords.
-  Download the email drafts below.
